Series Preface	v
Preface to the Second Edition	vii
Preface to the First Edition	ix
1 Introduction	1
1.1 What Is Mathematical Control Theory?	1
1.2 Proportional-Derivative Control	2
1.3 Digital Control	6
1.4 Feedback Versus Precomputed Control	9
1.5 State-Space and Spectrum Assignment	11
1.6 Outputs and Dynamic Feedback	16
1.7 Dealing with Nonlinearity	20
1.8 A Brief Historical Background	22
1.9 Some Topics Not Covered	23
2 Systems	25
2.1 Basic Definitions	25
2.2 I/O Behaviors	30
2.3 Discrete-Time	32
2.4 Linear Discrete-Time Systems	36
2.5 Smooth Discrete-Time Systems	39
2.6 Continuous-Time	41
2.7 Linear Continuous-Time Systems	46
2.8 Linearizations Compute Differentials	53
2.9 More on Differentiability*	64
2.10 Sampling	72
2.11 Volterra Expansions*	73
2.12 Notes and Comments	77

*Can be skipped with no loss of continuity.

3	Reachability and Controllability	83
3.1	Basic Reachability Notions	83
3.2	Time-Invariant Systems	86
3.3	Controllable Pairs of Matrices	94
3.4	Controllability Under Sampling	101
3.5	More on Linear Controllability	106
3.6	Bounded Controls*	119
3.7	First-Order Local Controllability	124
3.8	Controllability of Recurrent Nets*	130
3.9	Piecewise Constant Controls	138
3.10	Notes and Comments	140
4	Nonlinear Controllability	143
4.1	Lie Brackets	143
4.2	Lie Algebras and Flows	149
4.3	Accessibility Rank Condition	156
4.4	Ad, Distributions, and Frobenius' Theorem	166
4.5	Necessity of Accessibility Rank Condition	179
4.6	Additional Problems	181
4.7	Notes and Comments	183
5	Feedback and Stabilization	185
5.1	Constant Linear Feedback	185
5.2	Feedback Equivalence*	191
5.3	Feedback Linearization*	199
5.4	Disturbance Rejection and Invariance*	209
5.5	Stability and Other Asymptotic Notions	213
5.6	Unstable and Stable Modes*	217
5.7	Lyapunov and Control-Lyapunov Functions	220
5.8	Linearization Principle for Stability	235
5.9	Introduction to Nonlinear Stabilization*	241
5.10	Notes and Comments	259
6	Outputs	265
6.1	Basic Observability Notions	265
6.2	Time-Invariant Systems	272
6.3	Continuous-Time Linear Systems	280
6.4	Linearization Principle for Observability	284
6.5	Realization Theory for Linear Systems	287
6.6	Recursion and Partial Realization	294
6.7	Rationality and Realizability	301
6.8	Abstract Realization Theory*	307
6.9	Notes and Comments	315

*Can be skipped with no loss of continuity.

7	Observers and Dynamic Feedback	319
7.1	Observers and Detectability	319
7.2	Dynamic Feedback	325
7.3	External Stability for Linear Systems	330
7.4	Frequency-Domain Considerations	335
7.5	Parametrization of Stabilizers	341
7.6	Notes and Comments	349
8	Optimality: Value Function	351
8.1	Dynamic Programming*	353
8.2	Linear Systems with Quadratic Cost	367
8.3	Tracking and Kalman Filtering*	375
8.4	Infinite-Time (Steady-State) Problem	384
8.5	Nonlinear Stabilizing Optimal Controls	394
8.6	Notes and Comments	399
9	Optimality: Multipliers	403
9.1	Review of Smooth Dependence	403
9.2	Unconstrained Controls	405
9.3	Excursion into the Calculus of Variations	415
9.4	Gradient-Based Numerical Methods	421
9.5	Constrained Controls: Minimum Principle	424
9.6	Notes and Comments	427
10	Optimality: Minimum-Time for Linear Systems	429
10.1	Existence Results	430
10.2	Maximum Principle for Time-Optimality	437
10.3	Applications of the Maximum Principle	442
10.4	Remarks on the Maximum Principle	449
10.5	Additional Exercises	450
10.6	Notes and Comments	453
APPENDIXES		
A	Linear Algebra	455
A.1	Operator Norms	455
A.2	Singular Values	456
A.3	Jordan Forms and Matrix Functions	460
A.4	Continuity of Eigenvalues	464
B	Differentials	469
B.1	Finite Dimensional Mappings	469
B.2	Maps Between Normed Spaces	471

*Can be skipped with no loss of continuity.

C Ordinary Differential Equations	475
C.1 Review of Lebesgue Measure Theory	475
C.2 Initial-Value Problems	481
C.3 Existence and Uniqueness Theorem	482
C.4 Linear Differential Equations	495
C.5 Stability of Linear Equations	499
Bibliography	501
List of Symbols	527
